

# Care Quality Commission assessment Harris Memorial Surgery

## **Overview**

## **Overall Rating: Good**

The service is performing well and meeting our expectations.

Summary		
Safe	Good	
Effective	Good	
Caring	Good	
Responsive	Good	
Well-led	Good	

#### **Overall Service Commentary**

Date of Assessment: 14 January 2025 to 22 January 2025. Harris Memorial Surgery is a GP practice providing care to approximately 6,300 patients. The service operates from the main surgery and a branch surgery in Lanner. It is part of the NHS Cornwall and Isles of Scilly Integrated Care Board and delivers General Medical Services (GMS) under a contra ct with NHS England. The surgery is not part of a wider network of GP services. According to the Office for Health Improvement and Disparities, the service population falls within the 4th decile for deprivation, indicating a relatively higher level of deprivation. A focused assessment was conducted in response to concerns identified during the previous assess ment in May 2023, when the service was placed in special measures. This assessment covered all quality statements across the key questions of safe, effective, caring, responsive, and well-led. There was a strong focus on safety, with managers appropriately investigating concerns. Improvements were noted in the maintenance of the environment and the management of Infection, Prevention and Control (IPC). Clear responsibilities, role s, and systems of accountability supported good governance and management. Systems and processes for responding to and dealing with complaints have also improved. Remote clinical searches identified gaps in the required monitoring of patients on certain medicines . The practice addressed this immediately and implemented further systems and processe s to reduce the risk of recurrence. The practice was placed in Special Measures on 18 May 2023. At this assessment on the 22 January 2025, the practice demonstrated signific ant improvements. The practice is no longer rated as inadequate overall or in any of the ke y questions. Therefore, the practice is no longer in Special Measures.

↑ Back to top

#### **Overall People's Experience**

Recent survey results, including from the National GP Patient Survey and the NHS Friends and Family Test, showed most people were positive about the quality of their care and treatment. As part of this assessment, we asked the service to share a link with people on their website to enable them to share their feedback with CQC received feedback from 235 patients. A minority of the comments expressed concerns in accessing care, support and treatment in a way that met their needs. There was an active patient participation group (PPG) who represented the views of people using the service. Representatives from the PPG described how managers had made positive changes following feedback, for example improvements to the information shared with patients via the screen in the reception waiting area.

## Safe

**Rating: Good** 

Percentage Score: 63.00 %

► How do we score this?

#### **Summary**

This service is safe

#### Commentary

The practice had a good learning culture and people could raise concerns. The practice regularly reviewed, analysed, and learnt from events and incident s. The practice had systems, services, and processes to keep people safe and safeguarded from abuse. The practice had systems for the appropriate and safe use of medicines which required additional monitoring. The facilities and equipment met the needs of people and were clean and well-maintained. There was enough staff with the right skills, qualifications and experience. Managers made sure staff received training and regular appraisals to maintain high-quality care. At our last assessment, we rated this key question as Inadequate. At this assessment, we rated the key question as Good.

Safe

## Learning culture

#### **Overall Score**

#### ► How do we score this?

#### **Summary**

Good – This service maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

The practice had a proactive and positive culture of safety, based on opennes s and honesty. They listened to concerns about safety and investigated and re ported safety events. Lessons were learnt to continually identify and embed go od practice. Representatives from the Patient Participation Group (PPG) com mented the practice took concerns seriously and proactively made improveme nts. Complaints were shared with the PPG who told us they felt the service wa s open, honest and transparent in the sharing of information. People felt suppo rted to raise concerns and felt staff treated them with compassion and underst anding. Managers encouraged staff to raise concerns when things went wrong , staff understood how to raise concerns and report incidents both internally an d externally. Staff told us learning from events and incidents was shared in clin ical meetings and in team meetings with the wider staff teams. Staff told us lea ders were approachable and promoted an open, non-blame culture. Policies a nd procedures supported and promoted a learning culture. Significant events a nd complaints were discussed at meetings. There was a system to monitor inci dents and complaints. This included undertaking an investigation into the caus e and actions identified to address the concerns.

## Safe systems, pathways and transitions

#### **Overall Score**

#### How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of peop le's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

The practice worked with people and healthcare partners to establish and main tain safe systems of care. There was continuity of care, including when people moved between different services. Some partners said access had been challe nging and the practice had not always been as responsive as they would like i n meeting the needs of individuals. However, the practice had recently implem ented a new system and process to improve this. Staff were knowledgeable ab out their responsibilities to ensure patient referrals to other services were actio ned promptly and in line with policies and procedures. Staff we spoke with shar ed examples of how they worked with other healthcare services to ensure peo ple's needs were met. There were appropriate referral pathways to ensure peo ples' clinical needs were met. A system for processing information relating to n ew patients, including the summarisation of new patient records was followed. There was a backlog of 333 new patient records waiting to be summarised. Th e service was aware of this and had taken action to address the backlog. Refer rals to specialist services were documented and contained the required inform ation. There was a system to monitor referrals and follow up on any delays

## Safeguarding

#### **Overall Score**

1 2 3 4

#### ► How do we score this?

#### Summary

Good – This service maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

The practice worked with people and healthcare partners to understand what being safe meant to them and the best way to achieve that. They concentrated on improving people's lives while protecting their right to live in safety, free from bullying, harassment, abuse, discrimination, avoidable harm and neglect. The practice shared concerns quickly and appropriately with relevant partners. Staff were trained to appropriate levels for their role and were able to identify vulner able people. They were aware of the systems and processes to keep people safe and safeguarded from abuse. Staff felt confident in raising concerns. Staff knew who the safeguarding lead was and how to access them. We saw the practice had implemented policies and procedures which demonstrated partnership working with other agencies and local safeguarding teams. Electronic systems alerted clinical staff to any potential safeguarding concerns when accessing pat ients records. There were regular meetings and discussions between the practice and other health care professionals, such as social workers, to support and protect vulnerable adults and children from risk of harm.

#### Safe

## Involving people to manage risks

#### **Overall Score**

1 2 3 4

#### ► How do we score this?

#### **Summary**

Good – This service maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

People's needs were discussed during telephone and face to face consultation s. Staff informed people about risks, for example in relation to medicines, and documented this on their patient record. This ensured they had an opportunity for their views to be listened to. Staff were confident in the systems and proce sses to enable them to respond to a deteriorating patient. There were adequat e systems to assess, monitor and manage risks to patient safety. These had b een shared with staff. Appropriately trained staff completed consultations and provided specific advice to people.

Safe

#### Safe environments

#### **Overall Score**

1 2 3 4

#### How do we score this?

#### **Summary**

Good – This service maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

Staff were aware of their responsibilities to ensure the environment was safe fo r people, including their role in responding to an emergency. Staff had complet ed appropriate safety training. For example, health and safety, fire safety and i nformation governance. The facilities and premises were appropriate for the se rvices being delivered. Equipment was fit for purpose and in good working ord er. Environmental risks had been assessed and, where necessary, appropriate actions taken. Clear signage around the building supported people and staff in the event of an emergency evacuation. Fire evacuation grab packs were in sp ecific areas of the building, containing the business continuity plan, fire evacua tion procedure and a high visibility vest. The practice had made reasonable adj ustments when people found it hard to access services. The practice was resp onsive to the needs of people in vulnerable circumstances. Health and safety ri sk assessments had been carried out and appropriate actions taken.

We saw safe systems and processes were in place to support a safe environment.

## Safe and effective staffing

#### **Overall Score**

1 2 3 4

#### This score has been adjusted by CQC.

#### Read about why we adjusted scores (https://www.cqc.org.uk/guidance-

regulation/providers/assessment/assessing-quality-and-performance/reach-rating)

This assessment has been carried out using an updated CQC process whereby moderation has been used. This involves assessment teams reviewing sufficient evidence to review a complete Quality Statement (i.e. all applicable evidence categories) and recording this in our system using a single evidence category. We have used our scoring moderation process to ensure the correct quality statement score is given and have provided a full report for our findings for each quality statement. This will be available for providers in the draft report under a single evidence category. When we publish this, it will be displayed under the quality statement only.'

#### ► How do we score this?

#### Summary

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

The practice made sure there was enough qualified, skilled and experienced staff, who received effective support, supervision and development. They w orked well together to provide safe care that met people's individual needs. Staff told us there was enough staff to meet patient needs and prevent staff from working excessive hours. However, a small number of staff commente d that the recent restructure in the service had placed increased pressure on clinicians. Leaders were aware of safe staffing levels and responded

appropriately to meet demand. Staff were given protected time to complete ma ndatory training. The practice was able to demonstrate staff had the skills, kno wledge and experience to carry out their roles. An induction programme w as in place to support all newly appointed staff. Recruitment checks had been completed for all newly appointed staff prior to commencing in their roles. How ever, we found that some staff inductions had not been signed off by the person responsible for overseeing the induction. Some staff files did not contai n references from previous employment. There was no evidence a risk assess ment had been completed or evidence references had been requested. Following the on-site visit the practice provided assurances that references had been received for those files that did not contain this information and where this information could not be provided a risk assessment had been completed. There was a process to record staff immunisations status in line with national guidance. However, we found there were gaps in some files in the monitoring of staff immunisations. The practice provided assurances following the on-site visit that staff had been requested to provide the missing data and they had up dated the recruitment process to include a request for staff vaccinations at the time of appointment. There was a system to ensure triaging was carried out by suitably qualified and trained staff and appointments allocated to appropriate clinicians.

Safe

## Infection prevention and control

**Overall Score** 

#### ► How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

Staff were aware of their infection prevention and control (IPC) responsibilities and who the IPC lead was should they need additional support. Staff raised IP C concerns in team meetings. Staff knew how to manage clinical waste and sp ecimens. Cleaning schedules were in place and the premises were visually cle an. However, we found there were gaps in the auditing and oversight of the ar eas being cleaned. High level cleaning in clinic rooms had not been consistently carried out. Sharps bins inside all clinical rooms were appropriately managed. Personal Protective Equipment (PPE) was available to staff. However, during the on-site visit, we found clinical waste bins were not stored securely. We requested the practice to provide further information on this, however, this was not provided. Staff had received training on infection prevention and control. Policies and procedures were available to staff. An up-to-date infection prevention and control audit had been carried out. However, the actions following the audit, identified areas that were still in progress, and these had not been reviewed since November 2024.

Safe

## **Medicines optimisation**

#### **Overall Score**

#### How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

Prior to this assessment, some people reported difficulties with ordering repeat prescriptions and receiving the correct medicines. We found that concerns about medicine management were investigated and addressed appropriately. Staff identified people needing monitoring based on their medicines. Non-medical prescribers could consult with GPs daily (healthcare professional s who have undergone additional training and can prescribe medicines but are not GPs). Regular checks were conducted on emergency medicines and equipment, and medicines were stored securely at appropriate temperatures. However, the controlled drugs cupboard key was accessible to all staff. This was immediately addressed with a new system to improve security. There was no risk assessment for external cleaning staff accessing the dispensary with confidential patient medication history. We requested further information on this, but it was not provided. Prescription stationery was stored in an unlocked cupboard but was relocated to a secure location after our assessment. The service had effective systems for managing safety alerts and medicine recalls. Remote clinical searches identified shortfalls in patient monitoring for certain medicines. For example, 38 out of 218 people prescribed a direct oral anticoagulant (DOAC) had not received appropriate monitoring. Of 5 records reviewed, 3 patients were potentially overdue for monitoring. Additionally, 97 people were prescribed an SGLT-2 inhibitor (a medicine used to lower blood sugar) and 4 out of 5 records reviewed lacked information on associated risks of taking these medicines. The practice reviewed and strengthened their systems to ensure appropriate monitoring and review.

## **Effective**

**Rating: Good** 

Percentage Score: 67.00 %

▶ How do we score this?

#### Summary

This service is effective

#### Commentary

Staff involved people in the assessment of their needs, and support was provided where needed, to maximise their involvement. Staff worked with all agencies involved in people's care for the best outcomes and smooth transitions when moving services. Staff made sure people understood their care and treatment to enable them to give informed consent. Staff involved those individuals important to them in making decisions in people's best interests where they did not have capacity. At our last assessment, we rated this key question as Requires Improvement. At this assessment, the rating has changed to Good.

Effective

## **Assessing needs**

#### **Overall Score**

1 2 3 4

How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

People felt involved in the assessment of their needs and felt confident that staff understood their individual and cultural needs. Staff were aware of the needs of the local community. Digital flags on patients records highlighted additional support, such as the requirement for longer appointments or for a translator to be present. Staff identified opportunities to refer people to social prescribers (a service that connects people to activities, groups, and services in their community) to help improve health and wellbeing, for example, to support individuals experiencing mental health related condition

such has anxiety, stress and depression. Our clinical searches identified 449 people on the asthma register, 32 of those people had been prescribed 2 or more rescue steroids (treatment for severe asthma episodes) in the last 12 months. We reviewed 5 patient records and found 5 people had not been reviewed appropriately in line with national guidance, including an assessmen t at the time of prescribing and a timely follow up to check the response to treatment. Following our on-site visit, the service acted swiftly and i mplemented a new process to ensure people received the appropriate assess ment and follow up. We reviewed the appointment diary and saw appointment s were available to book the same day for urgent appointments and in the following few days for routine appointments.

## Monitoring and improving outcomes

#### **Overall Score**

1 2 3 4

► How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

There was a system in place to review health conditions such as diabetes and chronic kidney disease (CKD). However, our remote clinical searches identifie d some people had not been monitored appropriately. Following this being ide ntified, the practice told us they had reviewed the people who required further monitoring and invited them in for review. For example, our clinical searches id entified 122 people with a potential missed diagnosis of chronic kidney disease stage 3-5. We looked at a sample of 5 patient records, and all 5 had a missed diagnosis of CKD 3-5. Following our feedback, the practice told us they had re viewed 122 people's notes and coded them appropriately. The practice was ob served to be achieving 70.7% below the expected minimum target of 80% for c ervical screening, however, an action plan was in place to increase the uptake of cervical screening, which included extra clinics at evenings and weekends.

### Consent to care and treatment

## **Equity in access**

#### **Overall Score**

1 2 3 4

How do we score this?

#### **Summary**

Requires Improvement – This service generally maximises the effectiveness of people's care and treatment by assessing and reviewing their health, care, wellbeing and communication needs with them.

#### **Processes**

Score: 1 2 3 4

The practice undertook patient surveys to review the quality of care provided. Although the practice did not question patients directly about equity in access, most patients were satisfied with the overall service. However, feedback from people indicated access was challenging and people were not always able to get an appointment for their care and treatment needs. Since the last assess ment the practice had reviewed and developed their systems and processes for prioritising people presenting with the highest need. Staff had access to guidance to support decision making. Staff and leaders explained how they understood the needs of the local population and had developed the service in response. Staff told us they provided opportunities and support for different groups of the patient population to overcome health inequalities.

Score: 1 2 3 4

Do Not Attempt Cardiopulmonary Resuscitation (DNACPR) decisions were m ade in line with relevant legislation. We reviewed 3 patient records,1 of these r ecords indicated within a person's hospital discharge letter details of a DNAC PR, however, this had not been reviewed by the practice and was therefore no t immediately apparent on the persons clinical records for clinicians to access. End of life care was delivered in a coordinated way which considered the need s of those whose circumstances may make them vulnerable. People's wishes were recorded on their patient record which were available to local health prov iders who may need to access them.

Score: 1 2 3

Leaders had a detailed vision and values for the practice. Some staff told us they felt engaged by leaders at the practice. They told us they were listened to a nd had contributed to the development of the practice. However, some staff told us they felt communication between staff and leaders could be improved upon and did not always feel listened to. Some staff also told us that confidentiality was an issue in the practice, and they did not feel comfortable sharing personal and confidential information with some leaders. Staff were encouraged to keep their knowledge and skills up to date in line with continued professional development to support the practice. Leaders informed us there was a strong emphasis on the safety and well-being of staff.

Staff knew what a freedom to speak up guardian was (FTSUG) The practice had staff who had the role of FTSUG and to be a point of contact for any member of staff to raise concerns about colleagues, the practice or leadership. However, not all staff knew the name of the service's FTSUG. There were policies and processes to support speaking up and these were accessible to all staff.

Staff and leaders were clear on their individual roles and responsibilities including safeguarding and infection prevention and control (IPC). Patient confidentiality and information security was understood and upheld. Staff told us learning and development opportunities were identified during annual appraisals and appropriate training was sourced. Staff were encouraged to attend meetings where updates and new information was shared. Actions from meetings were recorded and accessible to all staff. There were processe s in place for managing risks, issues and performance. There was evidence of systems and processes for learning, continuous improvement, and innovation. Staff had access to all policies and procedures. However, we identified some gaps and areas for improvement from our clinical searches and from our on-site visit. The practice did not always have full oversight to ensure tasks we re being completed to keep people safe and in line with national guidance. For example, from IPC audits. Following issues being identified, the practice acted swiftly and implemented new processes to ensure people were not at risk.

Staff worked with stakeholders to build a shared view of challenges and of the needs of the population. Leaders told us they engaged with services they referred to regularly for feedback on the quality of referrals. Staff and external partners' views and concerns were encouraged, heard and acted on to shape the service and culture. The practice had regular engagement meetings with both commissioners and partner organisations in the area.
